Title:

**Treatment of Post-Concussion Symptoms
Related to Screens at Work, School or Play.**

Presenter:

Dr. Charles Tator

Problems with vision after a concussion are very common and often persist for months or years. These visual symptoms include sensitivity to light, eye strain, photophobia, eye pain with headaches and nausea, cyber sickness, and computer screen intolerance. Fortunately, we and others have discovered some effective treatments that can relieve symptoms and help return to work, school or play.
