Esophageal Stent Diet

Information for patients and caregivers

Read this booklet to learn:

• what an esophageal stent is
• why you need this diet
• what diet instructions to follow
• which foods are safe to eat

This document is intended to be used with instruction by a Registered Dietitian. Developed by Registered Dietitians of the University Health Network (Reviewed 2022).
What is an esophageal stent?
An esophageal stent is a plastic or metal tube that is placed in your esophagus to help keep it open. This stent makes it easier for food and liquids to pass through.

Why do I need this diet?
The stent is a narrow tube and may become blocked or clogged if you eat foods that are too hard or sticky.
It is less likely that the stent will get blocked if you:

- choose foods that are soft and moist
- chew your foods well
- take your meals with lots of fluids
Diet instructions to follow:

1. **Start with a liquid diet for the first 1 or 2 days after your stent is placed.** This gives the stent time to fully expand. After this, you can start gradually eating solid foods.

2. **Choose foods that are soft and moist, either naturally or when cooked.**
   - Do not eat dry, crumbly textures unless they can be softened with a liquid (for example, cookies dipped in milk or crackers in soup).
   - Add sauces, gravies, butter or margarine to moisten the foods that you eat.

3. **Take small bites and chew your foods well.**

4. **Drink plenty of fluids during and after meals.** Drinking carbonated beverages (pop) and warm liquids after meals may help keep the stent clean.

5. **Sit up straight when eating.** Sit for at least 30 to 60 minutes after eating.

6. **Have small meals often during the day.** Five or 6 small meals a day may be easier for you to manage, especially if you don’t have an appetite.

7. **If you have trouble eating enough to keep your weight up, try adding a nutrition supplement** (for example, Ensure or Boost). Contact your dietitian if you are not able to keep up your weight.
Use this table to help you choose safe foods

Sample Recipes

Chocolate Peanut Butter Shake
1 banana (fresh or frozen)
1 cup 3% milk
2 tablespoons smooth peanut butter
¼ cup of whey protein powder or plant-based protein powder
1 tablespoon cocoa powder

Instructions: Using a blender, blend all ingredients together until smooth.
Makes 1¾ cup.
This recipe has 580 calories and 39 grams of protein.
For every cup (250 millilitres), this recipe has 330 calories and 22 grams of protein.

Peach and Cinnamon Shake
1 cup peeled peaches (canned, fresh or frozen)
½ cup 3% milk
½ cup plain Greek yogurt
½ cup vanilla frozen yogurt
1 teaspoon honey
¼ teaspoon cinnamon

Instructions: Using a blender, blend all ingredients together until smooth.
Makes 2 cups.
This recipe has 370 calories and 20 grams of protein.
For every cup (250 millilitres), this recipe has 185 calories and 10 grams of protein.

Plant-Based Blueberry Shake
1 cup frozen blueberries (blended well)
1 cup non-dairy milk (soy or protein enriched almond)
½ cup non-dairy vanilla frozen dessert
2 tablespoons almond butter
¼ cup plant-based protein powder
½ teaspoon vanilla extract

Instructions: Using a blender, blend all ingredients together until smooth.
Makes 2 cups.
This recipe has 660 calories and 41 grams of protein.
For every cup (250 millilitres), this recipe has 330 calories and 20 grams of protein.
