What is nintedanib?
Nintedanib [pronounced nin-ten-da-nib] is in a group of medicines called tyrosine-kinase inhibitors and anti-fibrotic agents. Another name for this medicine is OFEV.

Nintedanib affects your body's immune system and reduces the amount of fibrosis (scarring) in the lungs. It is one of two medicines approved in Canada to treat Idiopathic Pulmonary Fibrosis (IPF).

Nintedanib is also approved to treat Progressive Fibrosing Interstitial Lung Disease (PF-ILD) which is a group of lung diseases that causes scarring in the lungs. Diseases that may fall into the PF-ILD family of conditions includes:
• asbestosis
• connective tissue disease-related interstitial lung disease (CTD-ILD)
• fibrotic chronic hypersensitivity pneumonitis (fibrotic cHP)
• pleuroparenchymal fibroelastosis
• sarcoidosis
• unclassifiable interstitial lung disease (uILD)
Is nintedanib right for me?
Your doctor recommends this medicine for your treatment. But, some patients should not take nintedanib. Tell your doctor:

• If you are allergic to nintedanib or any other medicines
• If you have an allergy to peanuts
• If have an allergy to soy products
• If you have ever had serious liver disease or kidney disease. Patients on dialysis should not use nintedanib
• If you are pregnant or trying to become pregnant

What do I need to know when taking this medicine?
Nintedanib can interact with other medicines and health products. This means it might not work well with these products. Tell your doctor:

• About all the medicines, supplements and herbal products you are taking. Tell your pharmacist too.

• If you are taking erythromycin (Biaxin), ketoconazole, rifampicin (Rifadin, Rofact), phenytoin (Dilantin), St. John's wart or carbamazepine (Tegretol). You should not take these medicines while you are taking nintedanib.

• If you have ever had serious heart disease and high blood pressure.

• If you have ever had bleeding or clotting problems. Tell your doctor if you take blood thinners or aspirin or if there is a history of major bleeding in your family.

• If you recently had, or will be having surgery. You should not start nintedanib within 4 weeks of abdominal (stomach) surgery.

• If you plan to become pregnant. Use birth control to be sure you or your partner will not become pregnant while you are taking this medicine.

• Do not breastfeed or chestfeed while taking this medicine.
What are the side effects of this medicine?
Nintedanib may cause side effects. Serious side effects are not common, but can happen if you are taking this medicine.

Tell your doctor if you have any of these symptoms:

- diarrhea (watery bowel movements)
- nausea (feeling like you need to throw up) or vomiting
- abdominal (stomach) pain
- loss of appetite
- weight loss
- yellowish skin colour
- chest pain

How can I reduce any side effects?
Take nintedanib with food. Swallow the pills whole with water because chewing or crushing the pills can give you a stomach ache and diarrhea.

Nintedanib can give you diarrhea (watery bowel movements). If you have diarrhea while on this medicine:

- Drink fluids to prevent dehydration.
- Use Imodium (loperamide) to control diarrhea. You can buy Imodium at your local pharmacy.
- Take 1 Imodium pill after each watery bowel movement.
- You can take Imodium up to 8 times per day. If you are taking the maximum dose of Imodium (8 pills a day), stop taking nintedanib and call your doctor

You do not need to take Imodium once your bowel movements go back to normal.
What follow-up care will I need?
Your doctor will order lab tests to see how well nintendanib is working. These tests can also help your doctor check for any side effects.

While you take this medicine, you will have regular tests to check your liver enzymes.

What if I miss a dose?
Take your next dose at your usual time. Do not take two doses at the same time.

Who can I call if I have question or concerns?
Please talk to your Interstitial Lung Disease doctor or nurse. They can answer any questions or concerns about nintedanib.
