

## Washing Instructions for Human Hair Wigs

### Cleansing:

1. Before shampooing, gently remove all tangles with a brush or comb. If hair is excessively tangled, use a spray-on conditioner.
2. Always use a mild shampoo or one specially formulated for chemically treated hair.
3. Run the hair under warm water. Place a small amount of shampoo on your fingers and gently work the shampoo into the hair by stroking downwards from the base to the ends. Do not twist, scrub, or rub the hair. Use shampoo sparingly.
4. Rinse the wig under warm water until the water runs clear. Be sure to rinse until all shampoo is removed. Improper rinsing can damage the hair.

### Conditioning:

1. Place a small amount of conditioner in your hand. Gently work it into the hair and let it sit for three to five minutes.
2. Rinse thoroughly in warm water.
3. Gently towel blot (dry? Blot is an unusual word for ESL) to remove excess water.
4. While wet, gently comb to remove tangles. Use a large toothed comb. Move it with a downward motion away from the cap (wefts is an usual word) to the ends. Do not use a bristle brush on wet hair, as it may pull out or break the hair.
5. Hang the wig to air dry, set in rollers, or use a blow dryer on a low setting, as desired.

### Styling:

1. Steam rollers or wet setting are the safest way to curl human hair.

Blow dryers, curling irons and other thermal tools may be used on low settings. Remember the hair may scorch if the setting is too high.
