

Nuclear Cardiology Clinic

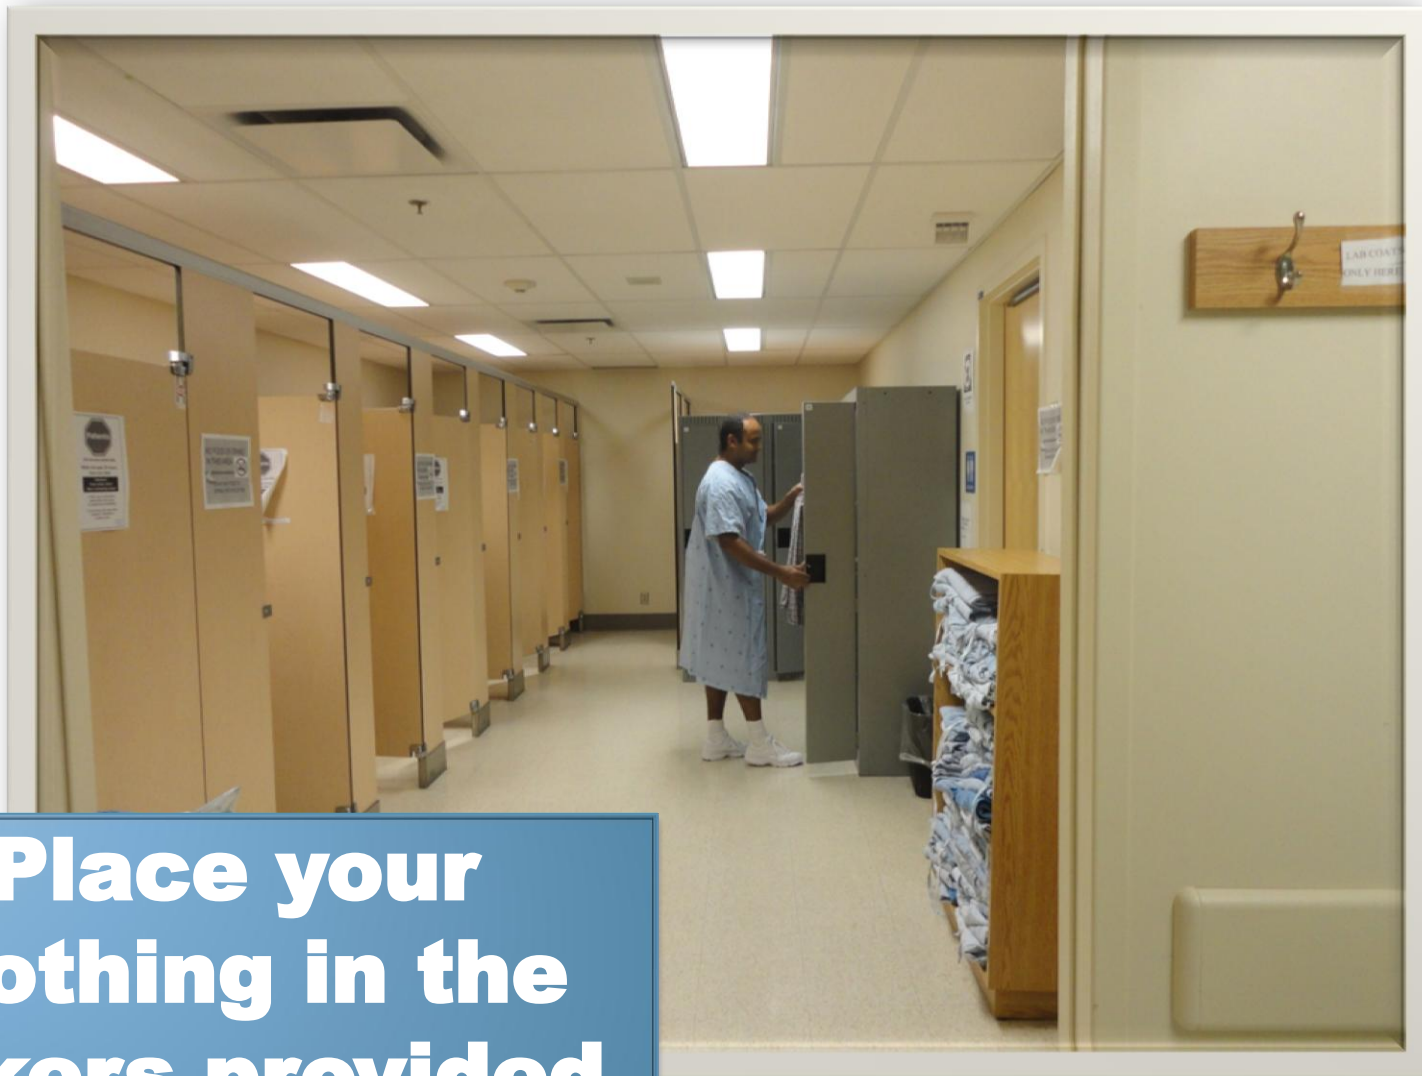

Exercise Myocardial Perfusion Test

**Check in at the
Nuclear Cardiology
desk**

Change into a gown, open to the front.

Place your clothing in the lockers provided.

**A technologist
will accompany
you to the lab to
begin your test.**

The test will be explained to you. You will be asked to sign a consent form for your test.

A technologist will give you an injection of a radioactive tracer to prepare your heart for your rest images.

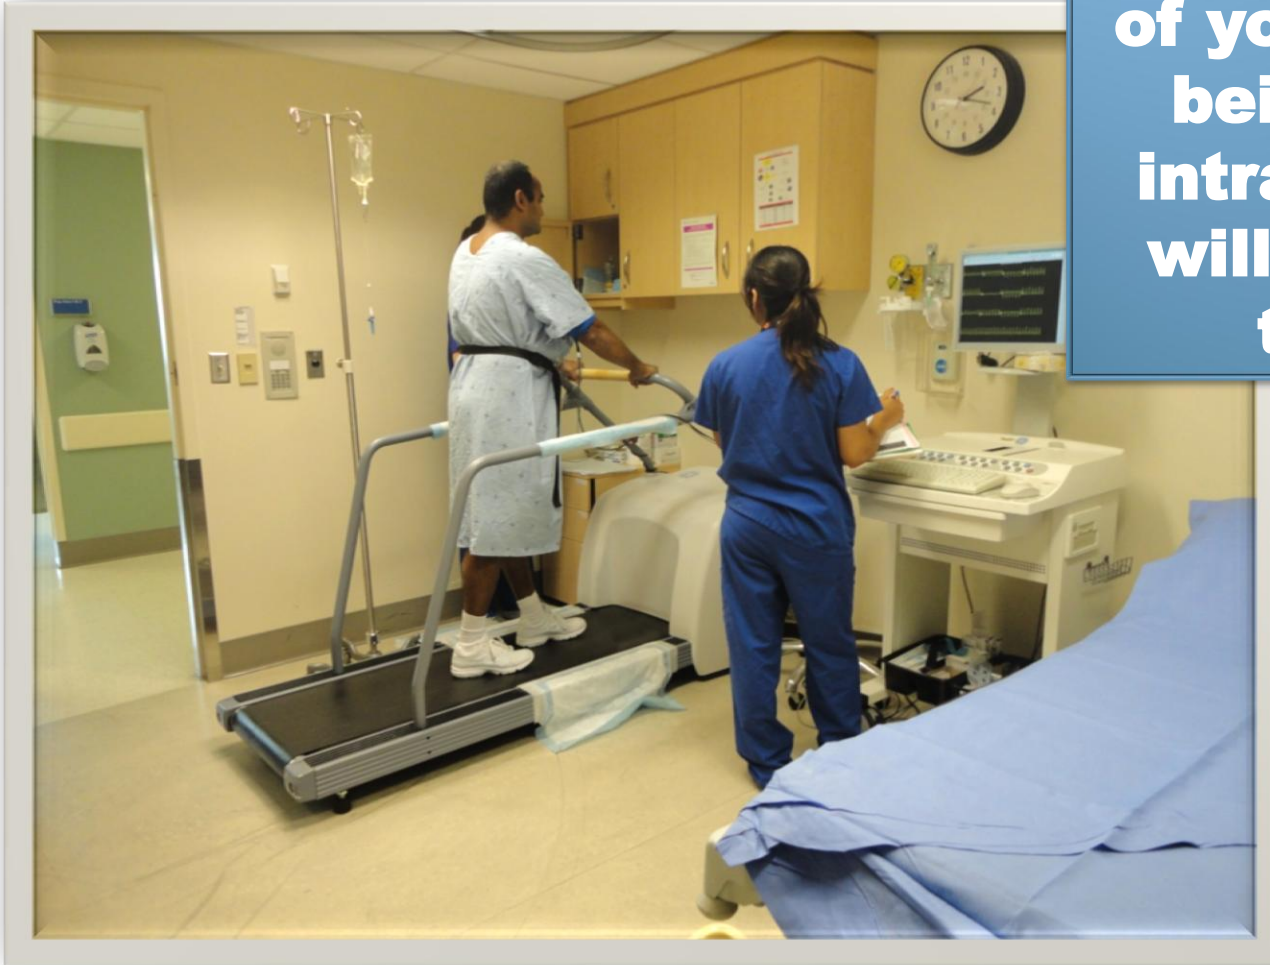

**A wait of
approximately
one hour will
follow your first
injection.**

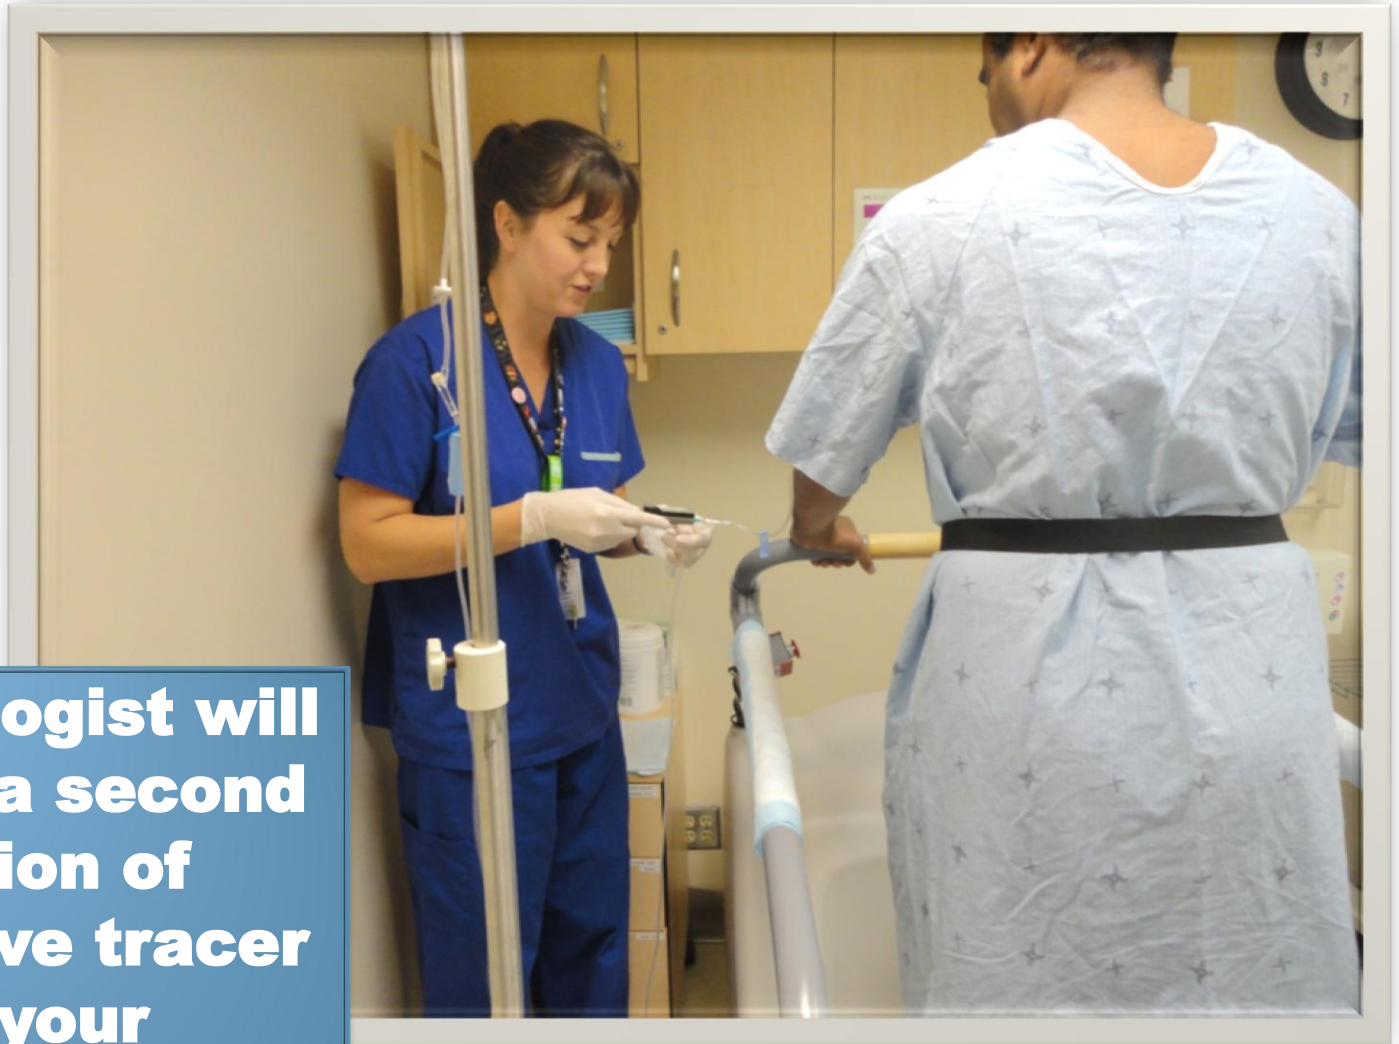

Your pictures will take about 25 minutes. It is important to be very still during this time.

You will now begin the stress portion of your test. After being given an intravenous, you will walk on the treadmill.

A technologist will give you a second injection of radioactive tracer into your intravenous while you walk.

**You will return
to the waiting
area for a short
time before
going to the
camera for a
second set of
images.**

**Your second set
of images will
be slightly
shorter than
your first.**

When your images are finished, a technologist will remove your intravenous for you.

Your test is now complete. It will be analyzed and the results will be sent directly to your doctor.
